

To the Board of Supervisors,

I understand that at your last meeting on 10-20-20 where you discussed the appeal of the Neighbors & Friends of Pine Mountain You decided that you needed to determine the color. Your resolution and attached monopine elevations mentions the colors, but not if the color will be non-reflective. Please assure that.

I believe that the original proposal for a stealth tower did not need a retaining wall. I did not see any measurements for this wall or the amount of materials needed for that wall. Is it because of the length of the monopine tower? Please complete missing info.

Will aircraft warning lights be installed?

The language in Exhibit A is vague as far as collocation is concerned. Will it include First Net services?

As Telecom companies are required to allow collocation it is interesting to note that whoever approaches the county first gets to more or less build a tower with no questions asked to prove how far away and how many towers already exist in the vicinity. We can blanket the earth and cause irreparable damage to people, animals & plants as the Telecommunications Act does not protect us. Neither do your guidelines (County Wireless Guidelines). They mention health, safety, comfort & general welfare in regards to be able to use a cell phone. When will we realize that with a power outage, a fire, an earthquake, strong winds, etc. these towers will most likely not work and we will also not be safe.

In 1962, when Rachel Carson published Silent Spring, insects were so thick upon this Earth that you could not drive a car very far, anywhere in the world, without its windshield becoming splattered with their bodies. This was still true well into the 1990s.

In 1970, Jacques Cousteau warned that the oceans were dying. Today the situation is far worse: it is predicted that in less than 30 years there will be more plastics than fish in the seas.

"Where Have All the Songbirds Gone?" wrote Joseph Wallace in the March/April 1986 issue of Sierra magazine. But in 1986 millions of birds were not yet falling dead out of the sky for lack of insects to eat, a circumstance that happened in North America during the fall migrations of 2020.

I write to you because there is a pervasive threat to insects, oceans, wildlife, and forests which has gone unrecognized and which cannot continue to be ignored. This is the electromagnetic soup in which we have immersed our world since the 1990s, courtesy of wireless technology. The rapidity with which this radiation is intensifying right now on land and sea due to 5G antennas and satellites is incredible. Living things cannot withstand it. Unless we join together and put a halt to it we have no chance of survival.

Let us work together to truly protect the health, safety, comfort & general welfare of all our citizens.

Sincerely, Annemarie Weibel
