Good Morning Supervisors,

Unfortunately I have prior commitments which prevent me from speaking to item 5E today but felt compelled to voice my concerns..

As I'm sure your well aware, the Department of Transportation relies heavily on reliable, high quality spec aggregate for our day to day maintenance as well as our improvement projects, emergency repairs and storm damage repair projects. Any disruption of local aggregate will significantly impact the department and add additional transportation and labor cost at a time when we are struggling to keep the road system functional.

While the department supports all responsibly permitted quarry's, the Harris quarry is centrally located, runs year round and is of high quality and provides a resource that is vital to the residents of Mendocino County.

Please consider the importance of this resource when voting today.

Respectfully,

Kent A. Standley

Deputy Director, Maintenance Services

Department of Transportation

County of Mendocino
