

Mr. Williams,

The majority of our citizens feel large scale expansion of cannabis production in rangeland is unacceptable. It would further deplete water resources, and, as the county will never be staffed or motivated to properly oversee it, it would result in continued, severe environmental degradation. These are common sense arguments that most citizens of our county understand, and--especially in a severe drought year--they will vote accordingly. Please align yourself with the majority of your constituents on this issue and work to avoid a costly special election.

Thank you.
