

RESOLUTION NO. 26-053

RESOLUTION OF THE MENDOCINO COUNTY BOARD OF SUPERVISORS SITTING AS THE MENDOCINO COUNTY AIR QUALITY MANAGEMENT DISTRICT BOARD OF DIRECTORS RECEIVING THE 2023 AIR TOXICS “HOT SPOTS” REPORT AND ADOPTING THRESHOLDS OF SIGNIFICANCE FOR RISK PRIORITIZATION SCORES

WHEREAS, the Air Toxics Information and Assessment Act became law in 1987 when Governor Deukmejian signed Assembly Bill 2588 (AB2588). Thereby, enacting California Health & Safety Code Section 44360; and

WHEREAS, the purpose of the program is to: 1) inventory air toxics emissions, 2) determine if these emissions are causing localized ambient concentrations of air toxics high enough to expose individuals or population groups to significant health risk, and 3) inform the public of significant risk; and

WHEREAS, the Mendocino County Air Quality Management District (District) through an agreement with Ray Kapahi, DBA Environmental Permitting Specialists has completed the Air Toxics “Hot Spots” Report for 2023 in satisfaction of California Health & Safety Code 44360, et.al; and

WHEREAS, the District is obligated under the Hot Spots Act to adopt thresholds of significance for risk prioritization scores, to guide the evaluation of facilities identified in the emissions inventory; and

WHEREAS, the completed 2023 Air Toxics "Hot Spots" Report was made available to the public for a period of not less than 30 days prior to this Board presentation, in satisfaction of the public notice requirements of the Hot Spots Act and Health & Safety Code Section 44360 et seq.; and

WHEREAS, the District requests the District Board of Directors receive the 2023 Air Toxics “Hot Spots” Report attached as Exhibit A and direct the District’s Air Pollution Control Officer (APCO) to complete all tasks related to the subject report.

NOW, THEREFORE, BE IT RESOLVED that the Mendocino County Board of Supervisors sitting as the District’s Board of Directors hereby:

- 1) Receives the 2023 Air Toxics “Hot Spots” report attached as Exhibit A;
- 2) Adopts the recommended thresholds of significance for risk prioritization scores as presented in Exhibit B; and
- 3) Directs the District’s APCO to complete all tasks related to the subject report.

The foregoing Resolution introduced by Supervisor Williams, seconded by Supervisor Haschak, and carried this 24th day of March, 2026, by the following vote:

AYES: Supervisors Cline, Mulheren, Haschak, Norvell, and Williams
NOES: None
ABSENT: None

WHEREUPON, the Chair declared said Resolution adopted and SO ORDERED.

ATTEST: DARCIE ANTLE
Clerk of the Board

Deputy

APPROVED AS TO FORM:
KATHARINE L. ELLIOTT
Interim County Counsel

BERNIE NORVELL, Chair
Mendocino County Board of Supervisors

I hereby certify that according to the provisions of Government Code Section 25103, delivery of this document has been made.

BY: DARCIE ANTLE
Clerk of the Board

Deputy

Exhibit A

**AB2588 Air Toxics “Hot Spots”
Program Annual Report for 2023**

January 10, 2026

**Mendocino County
Air Quality Management District**

1100A Hastings Road
Ukiah, CA 95482

Summary

The Air Toxics “Hot Spots” Information and Assessment Act of 1987 (AB 2588) is a State of California public right-to-know law requiring local air quality management and air pollution control districts to collect information about the location, type, and quantity of toxic air contaminants (TACs) emitted into the air.

This annual report is published to provide the public with information regarding the AB 2588 Program at the Mendocino County Air Quality Management District (MCAQMD). California Health & Safety Code (HSC) Sections 44300-44394 require the California Air Resources Board (CARB) and local air districts to implement the “Hot Spots” Program. This report describes the current reporting and evaluation status for the Mendocino County Air Quality Management District permitted facilities consistent with these requirements.

The goals of the AB 2588 Program are to collect emissions data, to identify facilities having localized impacts, to ascertain health risks, and to notify nearby residents of the significance of potential health risks. The AB 2588 Program requires certain emitters of airborne toxic compounds to submit toxic emissions inventory reports and updates. Facilities meeting certain criteria must also complete health risk assessments.

This report covers facilities permitted by Mendocino County Air Quality Management District (MCAQMD) during calendar year 2023. It provides an update on the Regulation for the Reporting of Toxic Air Contaminants¹ (TACs) adopted by the California Air Resources Board, effective January 1, 2022. Consistent with AB2588 requirements, only emissions from stationary sources are evaluated.

MCAQMD currently has approximately 280 active permits which are subject to AB2588 reporting. All facilities were either “Low” or “Medium” priority. A formal health risk assessment (HRA) is not required for facilities in these two categories. A refined health risk assessment must be prepared by any facility that is ranked as “High” priority.

² <https://ww2.arb.ca.gov/our-work/programs/ab-2588-air-toxics-hot-spots/hot-spots-inventory-guidelines>

I. Scope of Air Toxics “Hot Spots” Program

The AB 2588 Program established a process to compile an inventory of air toxics emissions from specified facilities within each air district. The goal of the program is to assess the potential risks to public health from exposure to toxic air contaminants. AB 2588 specifies activities that the CARB, the Office of Environmental Health Hazard Assessment (OEHHA) and the districts must carry out to implement the Act.

The overall goal of the program is to reduce the release of toxic air contaminants (TACs) within each District. This goal is achieved by:

- Preparing an inventory of TACs in each District
- Quantify health risks from exposure to these compounds
- Notify the public in cases where significant health risks are projected
- Mitigate the release of TACs from facilities with high emissions

The main sources of TACs in Mendocino County are:

- Boilers
- Crematories
- Emergency diesel fueled electric generators
- Gas stations
- Mining and mineral processing facilities
- Autobody and other facilities using paints and solvents

The current report is for permitted facilities for calendar year 2023. This report will be updated annually consistent with the AB2588 requirements. The annual report quantifies 3 types of public health risks from exposure to TACs:

- Cancer Risk
- Chronic Non-Cancer Risk
- Acute Non-Cancer Risk

These risks are reported as a prioritization score.

II. The District Risk Prioritization Procedure

The District reviews the permit to operate for each facility and calculates the emission rates for various toxic air contaminants. The specific methodology is summarized on the next page.

Process	Throughput	Basis for Emission Calculation
Boilers, Process Heaters	Cubic feet or therms of natural gas, propane, oil and biomass used annually. If annual throughput is unavailable, estimate annual fuel use based on heater size and a load factor of 0.6	Emission Factors published by the EPA ¹ for External Combustion Sources, Chapter 1, Sections 1.3, 1.4 and 1.6
Gas Stations	Gallons of fuel dispensed annually	CARB and CAPCOA emission factors and updated Industrywide risk assessment guidelines ² for retail gasoline dispensing facilities (GDF) using Phase 2 vapor recovery.
Asphalt Plants	Tons of asphalt produced annually	Use spreadsheets developed by San Joaquin Valley APCD based on EPA AP-42 Tables 11.1-10 and 11.1-12
Crematories	Annual usage of natural gas and number of incinerations. All crematories are assumed to be equipped with an oxidized or similar device for controlling VOCs	Spreadsheet developed by SJVAPCD for crematories
Internal Combustion Engines	Engine horsepower, annual hours	CARB Emission Factors for Tier 3 or higher compression ignition (diesel) engines. If high priority is projected, conduct a refined evaluation based on engine make, model and serial number
Paint Booths	Gallons of paint used annually	Data from SDS to calculate annual emission rate of each regulated TAC. Where SDS or paint volume is unavailable, assign a risk score of zero. This calculation will be updated once the paint usage and SDS data are available.

The risk prioritization score is calculated consistent with AB2588 and OEHHA Guidelines. The District used the prioritization calculator developed by the San Joaquin Valley Air Pollution Control District³ to calculate the risk prioritization score for each facility. This calculator is based on the recommendations by the California Air Pollution Control Officers Association (CAPCOA) for calculating a facility’s risk score.

¹EPA 92023) “ External Combustion Sources” Chap. 1 Section 1.4. Available at: <https://www3.epa.gov/ttnchie1/ap42/ch01/>

² CAPCOA (2016) “Facility Prioritization Guidelines”. Available at: <https://ww2.valleyair.org/permitting/air-toxics-program/resources-for-regulated-facilities/prioritization/>

³ SJVAPCD (2024): “Air Toxics Program” . Information available at: <https://ww2.valleyair.org/permitting/air-toxics-program/resources-for-regulated-facilities/prioritization/>

The risk prioritization score by its very nature is a conservative overestimate of potential health risk. This score depends solely on the annual and hourly emission rates of various TACs and the distance from the facility to nearest home. This procedure does not take into account the local weather, terrain and other factors that can significantly influence the actual health risks to the public.

The following thresholds are used to rank a facility’s potential health risk impact:

Facility Prioritization Score (S)	Facility Description
$S \geq 25$	High Priority
$1 \geq S \leq 25$	Intermediate Priority
$S < 1$	Low Priority

III. Results of Facility Prioritization

Based on data for 2023 data reported by each facility, the risk prioritization scores are summarized below.

Priority Score	Number of Facilities
Low	231
Intermediate	49
High	0

The detailed facility list is provided in Table 1 and is based on data provided by each permitted facility. Scores below 0.001 are reported a “< 0.001”.

Facilities with a cancer prioritization score of zero (0) indicate that either the facility was inactive or there was not sufficient information available to assign the score. None of these facilities are expected to be in the “High Priority” category. This report will be updated annually.

Exhibit B

**Mendocino County Air Quality Management District
Thresholds of Significance for Facility Prioritization Scores**

Pursuant to the Air Toxics "Hot Spots" Information and Assessment Act of 1987 (AB 2588), and as required under Health and Safety Code sections 44300-44394, air pollution control and air quality management districts are required to establish the prioritization score thresholds used to determine which facilities must prepare a health risk assessment under Health and Safety Code Section 44362. Prioritization scores are calculated separately for cancer risk, chronic non-cancer health effects, and acute non-cancer health effects, with a facility's overall priority determined by the highest score across all three categories.

Facility Prioritization Score (S)	Facility Description
$S \geq 25$	High Priority
$1 \geq S \leq 25$	Intermediate Priority
$S < 1$	Low Priority

The above thresholds are based on analysis of the District's emissions inventory, facility data, applicable guidance from the California Air Resources Board, and thresholds adopted by similar air quality management districts throughout California. The District may revisit and revise these thresholds as necessary to reflect changes in applicable state or federal law, updates to Health and Safety Code sections 44300-44394, or revised guidance issued by the California Air Resources Board.
