Section 15. Findings

Pursuant to Health and Safety Code Sections 17958, 17958.5 and 17958.7, the Board of Supervisors expressly finds that this ordinance and the changes or modifications made herein to the 2016 edition of the California Building Standards Code, including the amendment requiring one exterior hose bibb for each residence and the adoption of Appendices C, G, H and I of the California Building Code; Appendices E, K, R, S and V of the California Residential Code; Annex H of the California Electrical Code; Appendices A, B, D, I and J of the California Plumbing Code, are reasonably necessary because of local climatic, geological and topographical conditions. The Board of Supervisors further finds in connection therewith as follows that the following climatic, geological and topographical conditions exist in the County:

1. Mendocino County is a rural coastal county in a high seismic zone, two known fault zones in the county are the Maacama Fault Zone located between Hopland and Laytonville; and active breaks along the San Andreas fault between Bolinas Bay (Marin County) and up to Point Delgada (Humboldt County).
2. Mendocino County is made up of rugged coastal and inland mountains and foothills, with intermittent valleys. Surface soils in Mendocino County vary from expansive to alluvial fan material, both expansive. Expansive soils swell and shrink with variations in moisture content resulting in (1) differential “settlement” of structures, and (2) variations in surface storm water runoff. In addition, soft soils in combination with the presence of a high water table can cause liquefaction in some sites in the event of a major earthquake shaking.
3. The California Department of Forestry and Fire Protection has designated the majority of Mendocino County as being either a High Severity Zone or a Very High Severity Zone.
4. As provided by Chapter 16 of the 2016 edition of the California Building Code, Mendocino County is located in a 110 mile per hour wind zone.
5. Rainfall generally occurs between October and April, but does not occur during the warm summer months, when temperatures can exceed 100 degrees in parts of the County. During the summer months, dry winds and vegetation mix to create a hazardous fuel condition, which causes grassland and brushland fires each year. Particularly during times of high temperatures and low humidity, a fire can move quickly through the County.

The aforementioned findings identify the local climatic, geographical and topographical conditions which this Board has considered in adopting this ordinance. The Board finds that these conditions make the modifications as set forth herein reasonably necessary as said modifications will assist in mitigating the local climatic, geological and topographical conditions. These findings are intended to support each of the amendments to the building standards made as part of this ordinance based on local conditions.

SECTION 16. The Board of Supervisors hereby finds and determines that this ordinance is exempt from the California Environmental Quality Act ("CEQA") pursuant to Section 15061(b)(3) of the State CEQA Guidelines as it can be seen with certainty that there is no possibility that this ordinance may have a significant effect on the environment. This finding and determination is based on the environmental determination of the Department of Planning and Building Services for this ordinance. The Director of Planning and Building Services is directed to file a notice of exemption in accordance with CEQA and the State CEQA Guidelines.
