

Mental health systems here on the coast (MCHC, RCS and behavioral health) are doing severe damage to this community by over medicating their clients, locking down access to services by not providing actual services that are spelled out in the MHSA plan, purposely keeping clients in distress as to keep billing and asking for more public funds because it is so broken.

Broken by design.

I wish people would look at the damage their decisions make when they only look at the bottom line, not the outcome, especially with the most vulnerable of our society.

Richard Mack
