

I would appreciate hearing from all of you about these issues.

We are contributing heavily to the climate problems here in CA and the world overall.

Helping Mendocino County clean up our air with stricter regulations is necessary. We don't require annual smog tests and we allow wood burning stoves & fireplaces for heat as well as the burning of wood piles on our property. These are major contributors to the amount of methane, non-methane hydrocarbons, and nitrous oxide pumped into the atmosphere. Our County is must be a strong proponent for creating a climate-resilient and zero-carbon world, powered by renewable energy. Are any actions being taken to address these issues? Could you build a program to assist home owners in switching to propane?

What about wind turbines - feasible with all our wind? I look forward to your answer.
