

Sent from my iP

I am writing to object to the issue of Rezone request, we don't need a large greenhouse in a residential area, one reason is our water situation here in Redwood Valley, we just don't have the water table here to support a large grow area, and with a green house they can grow up to two or three crops a year. The other issue is the light pollution that it produces and the sound of fans to get rid of extra moisture. Please don't allow this to happen in our valley, unfortunately we have an awful lot of this element here already. This doesn't even take into consideration the element of the crime that this brings into our community. We live off of Amazon rd and are surrounded by growers, I really worry all the time, especially during harvest time.
