

As long time residents of rural Mendocino County we are adamantly opposed to the new proposed expansion of grow sizes in Range land of up to 10%, being considered in Phase 3. Mendocino County is known for high quality cannabis grown on smaller artisanal farms. We do not want or need industrial corporate cannabis grown in our county. When the local people can participate, the local economy benefits in the long run. Please do not turn to the industrial model. The original grow size in Prop 64 was  $\frac{1}{4}$  of an acre.

Consider the environmental effects of acres of cannabis grown on range land. Where is the water coming from during these times of draught?

Please listen to the people of this county. Vote No on 10% cannabis grows on range land in Phase 3.

Thank you for your time and consideration,

John and Marbry Sipila
