

Huge thank you for your support to protect JDSF through your resolution 21 includes very productive and positive solutions!!

Science based forest management must be part of California's public forests. Until then we need a moratorium on commercial logging of JDSF. As well we must create a permanent divorce of Calfire from forest management. They are great at fire but as you know, horrible for their "management" practices of consistently rubber stamping both private and public forests no matter the long term cumulative impacts, especially to water and riparian life zones.

We support item 4a on tomorrow's agenda!!!

Sincerely,

Francesca Ciancutti
