

As a 50 year resident of Mendocino County, living adjacent to Jackson State Forest, I ask you to pursue and advocate for changes in the CA State agency now known as CalFire. The attitude of logging/harvesting for profit has to stop. CalFire was originally entrusted as caretakers of vast forestlands for the people of our state. Now they are loggers for profit, using outdated logging practices in opposition to known science.

I suggest CalFire should become primarily a firefighting agency with a forest management agency being established of and for the people of the state based upon actual science backed healthy management practices.
